

## **SE 6316, Agile Methods**

### **Project Assignment P04, Sprint 3 Review**

New practices in Sprint 2:

- use test-driven development as described in the XP lecture and the TDD lecture
- use refactoring as described in the XP lecture and the refactoring lecture

Put together your presentation for the Sprint Review Meeting. The presentation part should include:

1. Product Backlog
2. Sprint Backlog for this Sprint
3. Taskboard with status for each user story and task
  - Did you split any stories?
  - Are there any stories (including split stories) that remain to be done?
  - Do you have any tech stories in your Sprint Backlog?
4. Sprint Burndown Chart (by day)
5. Lessons learned in this Sprint
  - on TDD
  - on refactoring

Your team will also demonstrate the features that you have implemented in this Sprint. That means you will need test cases to demonstrate that you have correctly and completely implemented the user stories that you can run in the demo.

Do a clean demo! Practice running the demo on the system that you will use to do the demo.

### Grading Rubric

Presentation, each of the five parts, 20 points

Demo of working software counts toward part 4

Lessons learned should include a discussion of the new practices added for this Sprint as well as any other lessons.

Note that your team will NOT be graded on how many features were actually implemented in the Sprint. Given the magnitude of the requirements change for this Sprint, your “done” stories may fall back significantly! You may want to consider discussing this as a lesson learned...
